NON-WSQ COURSE · C818

ChatGPT WORK for Digital Marketing

Flyer design · Social articles · Email campaigns

Tertiary Infotech Academy Pte Ltd
UEN: 201200696W

Version 1.0 · 1 October 2026 · 2 days / 15 instructional hours

What you will build

1 Flyer package

An editable A5 flyer, source proof and square/story derivatives.

2 Social package

A developed article, distinct captions and five-post calendar.

3 Email package

Three unsent emails, eligible synthetic audience and metric handoff.

One shared campaign · the same catalogue facts across every channel

© Tertiary Infotech Academy Pte Ltd

Learning outcomes

LO1: Delegate a grounded marketing task in ChatGPT Work and maintain a source-checked campaign brief.

LO2: Create and verify editable flyer designs and format variants using the academy brand.

LO3: Produce useful social articles, platform packages and a coherent content calendar.

LO4: Prepare a segmented email sequence, interpret synthetic campaign metrics and hand off a reviewable package.

© Tertiary Infotech Academy Pte Ltd

LEARNING FLOW

How You'll Learn

1 **Demonstrate**

Concept and worked example

2 **Build + verify**

Create the asset and prove it

3 **Discuss + recap**

Review a choice and improve it

Detailed instructions and prompts live in the Learner Guide and lab READMEs.

© Tertiary Infotech Academy Pte Ltd

COURSE ROUTE

Two days, one connected campaign

1

Day 1 · Ground

Labs 1–2: source facts, brief and reusable workflow.

2

Day 1 · Design

Labs 3–4: A5 flyer, variants and visible-text proof.

3

Day 2 · Connect

Labs 5–8: social, email, synthetic metrics and handoff.

Daily plan: 09:30–18:30 · 60-minute lunch · 30 minutes of tea breaks · 450 instructional minutes

© Tertiary Infotech Academy Pte Ltd

SETUP

Bring the right tools and context

1 Work access

A ChatGPT account with Work available; features vary by workspace.

2 Preview tools

Browser and layout editor. Python 3 previews the supplied website.

3 Recovery route

Each lab folder includes source files, prompts and a supplied checkpoint.

Use project Sources on web or an approved local project folder on desktop.

© Tertiary Infotech Academy Pte Ltd

Ground rules for useful work

1

Participate

Ask questions, compare choices and return on time.

2

Use synthetic data

Only fictional catalogue and example.com contact records.

3

Keep work reviewable

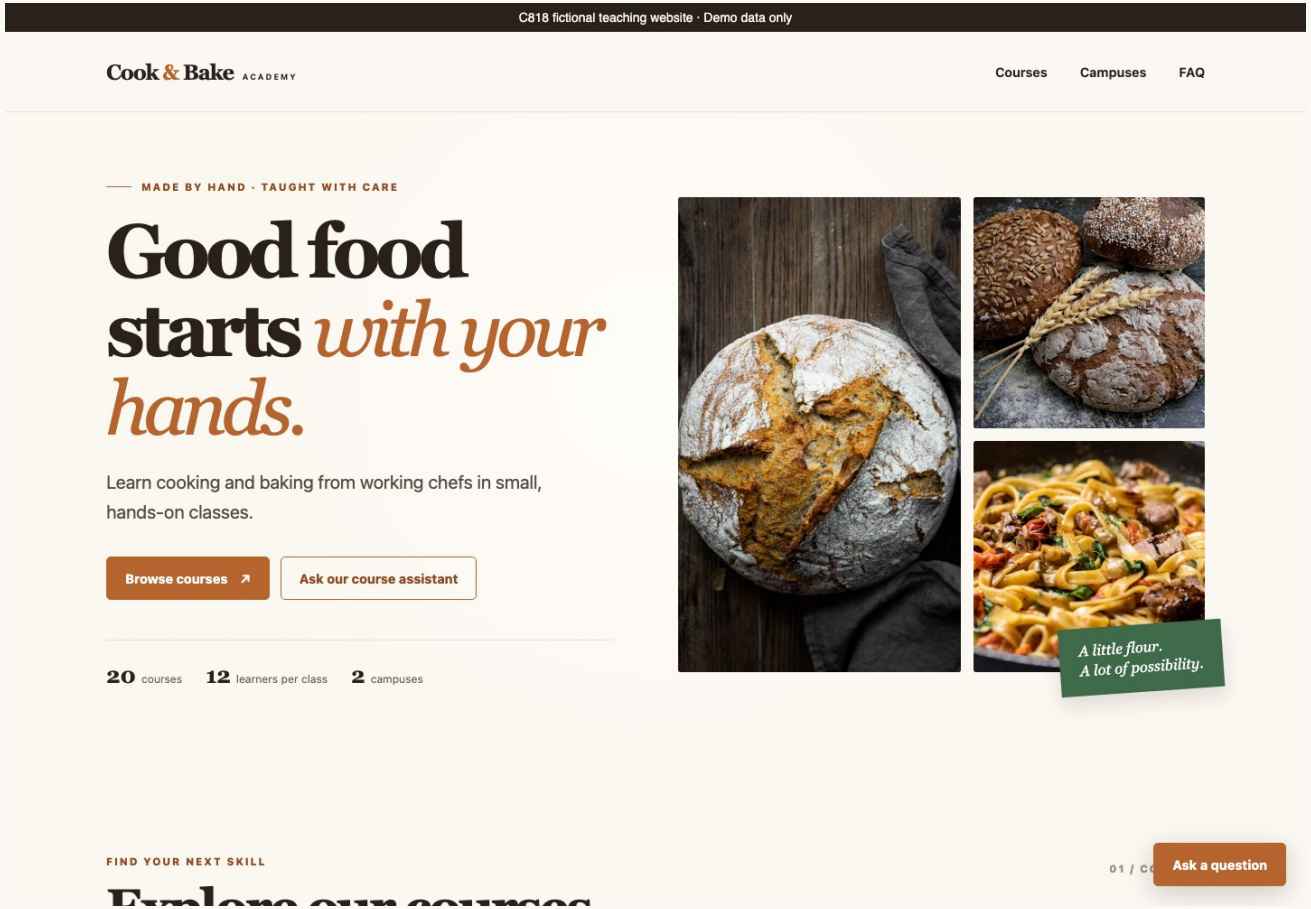

Save editable files and evidence; all campaigns stay unsent drafts.

Unknown offers stay UNKNOWN. Review each saved file before using it.

© Tertiary Infotech Academy Pte Ltd

SHARED SCENARIO

The existing Cook & Bake Academy site

20 synthetic courses

10 Bakery + 10 Cooking

Campaign spine:

BAK-101 Sourdough

Cafe-business angle is a proposal.

© Tertiary Infotech Academy Pte Ltd

ChatGPT Work and a grounded brief

Delegate an outcome · control context · verify facts

Understand the model. Apply it to the academy. Verify the saved result.

© Tertiary Infotech Academy Pte Ltd

From conversation to finished work

A short chat is useful for exploring an idea.

1 **Outcome**

Campaign brief

2 **Evidence**

Claim ledger

3 **Review**

Open both files

For the bakery launch, request a campaign brief plus a claim ledger. The ledger must point each fee, date and duration to a catalogue field. The brief is complete only when both files can be opened.

CHECK · Do not substitute an attractive response in the chat for the requested downloadable files.

© Tertiary Infotech Academy Pte Ltd

Choose Chat, Work or Codex

Use Chat for quick exploration, Work for a reviewable deliverable, and Codex when developer views help.

1 Chat

Explore a hook

2 Work

Build campaign files

3 Codex

Inspect code changes

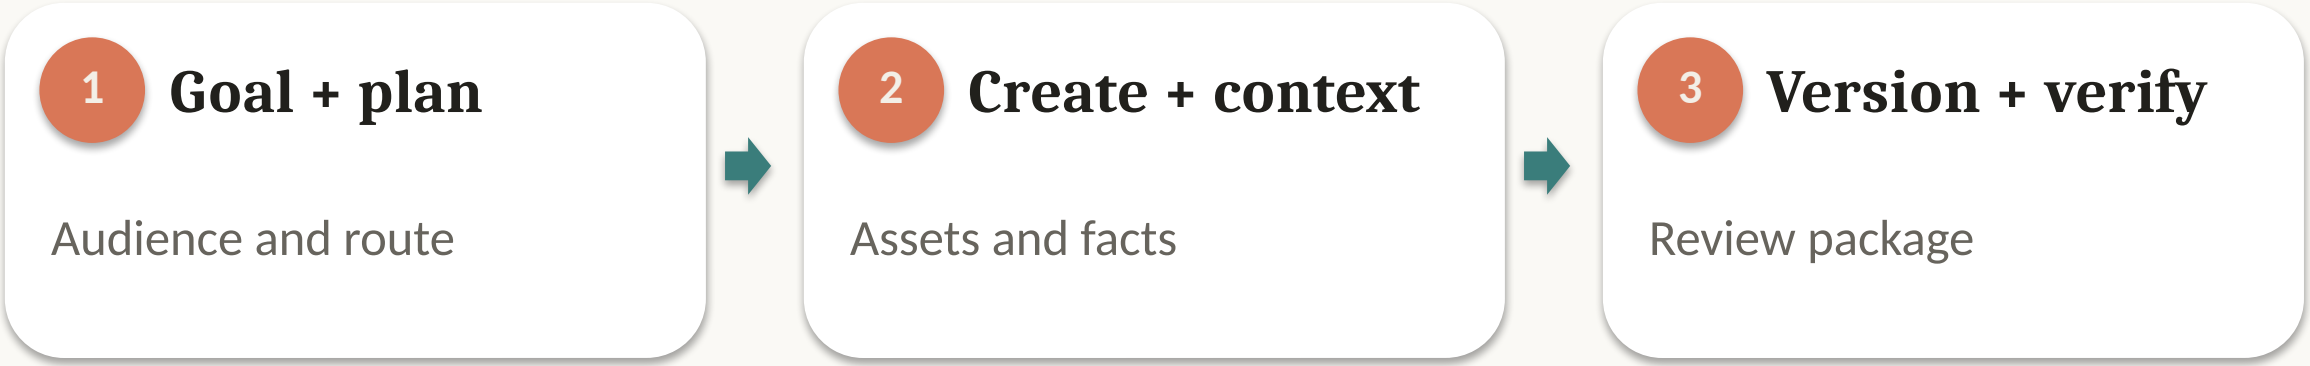

In this course Work drafts and packages the marketing assets. A browser displays the academy catalogue. A local Python server is only a way to preview the provided website.

CHECK · Do not assume a web project can read a laptop folder, or that a copied path grants file access.

© Tertiary Infotech Academy Pte Ltd

The seven-stage marketing workflow

The reference build workflow becomes a marketing production loop: define the goal, plan the work, create assets, preserve context, version the outputs, prepare distribution and verify the result.

A learner chooses one catalogue course, reviews a two-route flyer plan, creates one route, records its sources and hands the draft to a reviewer. Each revision retains the course facts.

CHECK · Do not carry over coding-specific commands or assume hooks publish a campaign.

© Tertiary Infotech Academy Pte Ltd

A brief is a decision document

A useful brief answers who the message is for, what change is desired, what is being offered, why it matters and what action follows.

1 Audience

Weekend home baker

2 Need

Starter confidence

3 Action

Review course details

For BAK-101, a weekend home baker wants more confidence managing a starter. The proposed action is to review course details. Bookings, paid spend and sales targets are UNKNOWN in the teaching scenario.

CHECK · A generic objective such as increase awareness cannot guide a single flyer or its verification.

© Tertiary Infotech Academy Pte Ltd

Build a claim ledger

A claim ledger distinguishes a source fact, a creative proposal and an unknown.

Item	Evidence / criterion	Decision
Fact	fee = 680	Use
Proposal	Bake with confidence	Propose
Unknown	Seats remaining	Check

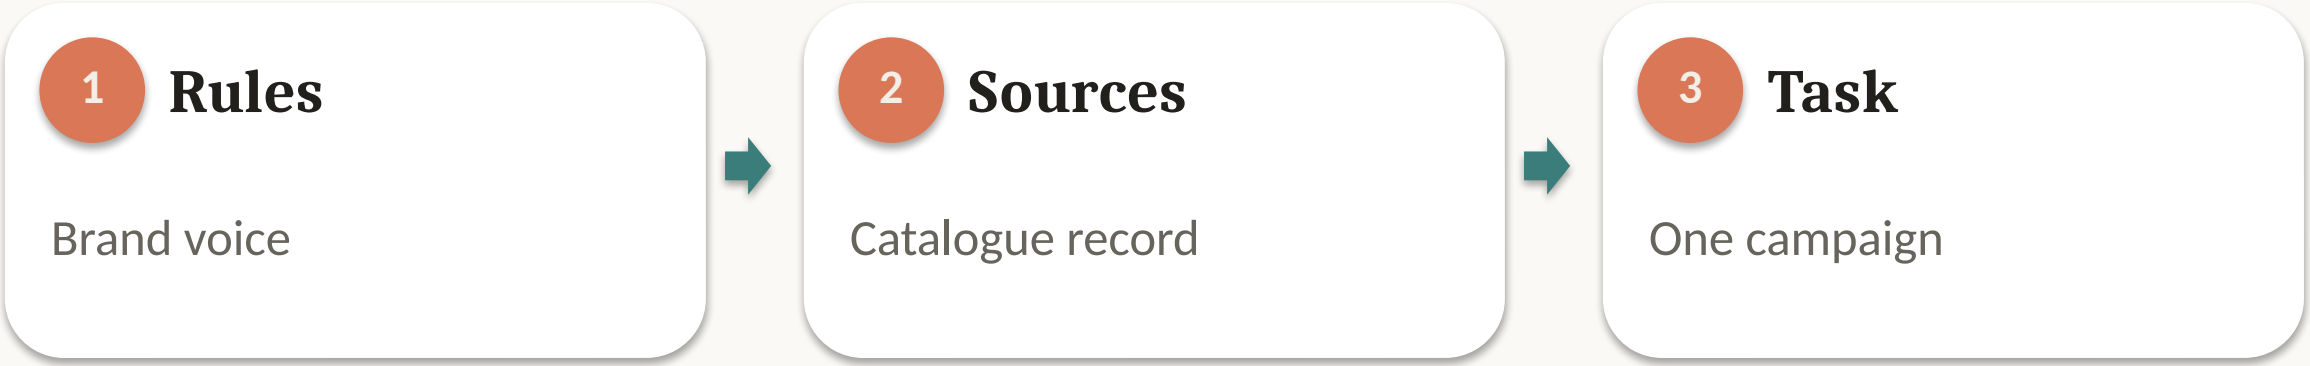

BAK-101 has fee 680, weeks 4 and campus Orchard Road in data/courses.json. Record them as scenario facts. A proposed headline is creative copy. Seats remaining is UNKNOWN; class_size 12 is a capacity, not an availability count.

CHECK · Never turn a capacity into scarcity or a published fee into a discount.

© Tertiary Infotech Academy Pte Ltd

Context has layers

Persistent project guidance carries brand and working rules.

The project contains brand.md, market-brief.md and courses.json. The task selects BAK-101 and asks for an A5 flyer. Past social drafts can guide voice, but cannot supply new dates.

CHECK · Do not let a previous generated draft become the authority for course facts.

© Tertiary Infotech Academy Pte Ltd

Outcome, sources, constraints, checks

A production prompt states the artifact, permitted sources, limitations and observable checks.

1 Outcome

Editable flyer

2 Constraints

Approved facts only

3 Checks

Text proof + sources

Create an A5 flyer for BAK-101 using the catalogue and brand files. Keep all factual copy editable. Return a text proof and source ledger. Stop before publishing.

CHECK · More detail is not always better: contradictory instructions can make the deliverable impossible.

© Tertiary Infotech Academy Pte Ltd

Handle missing information visibly

UNKNOWN is a useful production state.

1 **Know**

Catalogue facts

2 **Propose**

Audience angle

3 **Hold**

Unsupported offer

A cafe-owner audience angle is a proposal supported by baking relevance. A barista syllabus, voucher offer and live booking URL are absent from the catalogue and remain UNKNOWN.

CHECK · Do not invent missing contact information just to fill a flyer footer.

© Tertiary Infotech Academy Pte Ltd

Files and plugins have boundaries

Work can use files and installed plugins, but availability and permissions vary.

1 **Read**

Synthetic sources

2 **Write**

Draft assets

3 **Send**

Separate approval

If no email plugin is installed, Work still produces the sequence, HTML preview and handoff manifest as files. A marketer can import them later into an approved platform.

CHECK · Do not paste account credentials into a prompt or include private subscriber exports.

© Tertiary Infotech Academy Pte Ltd

Review the actual artifact

Verification happens in the saved file, not only in the agent summary.

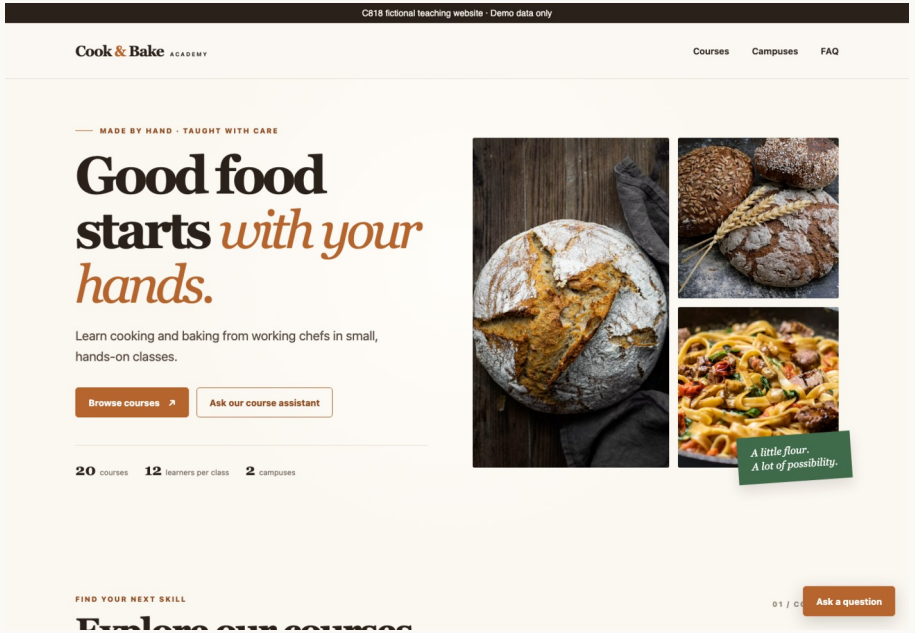

The brief says BAK-101 is four weeks. Open the flyer PDF and social article to confirm both say four weeks, then compare against the selected catalogue record.

CHECK · An agent saying checked everything is not a substitute for a readable proof.

© Tertiary Infotech Academy Pte Ltd

Reuse the academy website

The existing Cook & Bake Academy catalogue is the shared scenario.

CHECK · Do not rename the academy or add a cafe course to make the scenario appear more complete.

© Tertiary Infotech Academy Pte Ltd

Checkpoint: one source of truth

At the first checkpoint, a learner should have a campaign brief, selected course record, claim ledger and list of unknowns.

1 **Brief**

Audience + objective

2 **Ledger**

Field-level evidence

3 **Handoff**

Same code everywhere

The supplied checkpoint chooses BAK-101 and keeps discounts, real registration links and remaining seats UNKNOWN. Later assets inherit that boundary.

CHECK · Do not proceed with conflicting course codes across the brief and ledger.

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 45 MINUTES

Lab 01 · Create a grounded campaign brief

Produce a source-checked campaign brief for one bakery course.

1 What you'll build

campaign/brief.md, campaign/selected-course.json, campaign/claim-ledger.csv and campaign/unknowns.md

2 Why it matters

Apply chatgpt work and a grounded brief to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-01-grounded-campaign-brief/README.md

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 50 MINUTES

Lab 02 · Build a reusable marketing workflow

Create and trial a source-grounded production playbook for the campaign.

1 What you'll build

campaign/workflow.md, campaign/brand-check.md and campaign/workflow-trial.md

2 Why it matters

Apply chatgpt work and a grounded brief to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-02-reusable-marketing-workflow/README.md

© Tertiary Infotech Academy Pte Ltd

Topic 1 recap

1 Explain

From conversation to finished work. Explain why it matters to the campaign.

2 Show

Open the current lab outputs and identify the evidence that supports their facts.

3 Improve

Name one correction and the next check another marketer can reproduce.

LO1: Delegate a grounded marketing task in ChatGPT Work and maintain a source-checked campaign brief.

© Tertiary Infotech Academy Pte Ltd

Flyer design and visual review

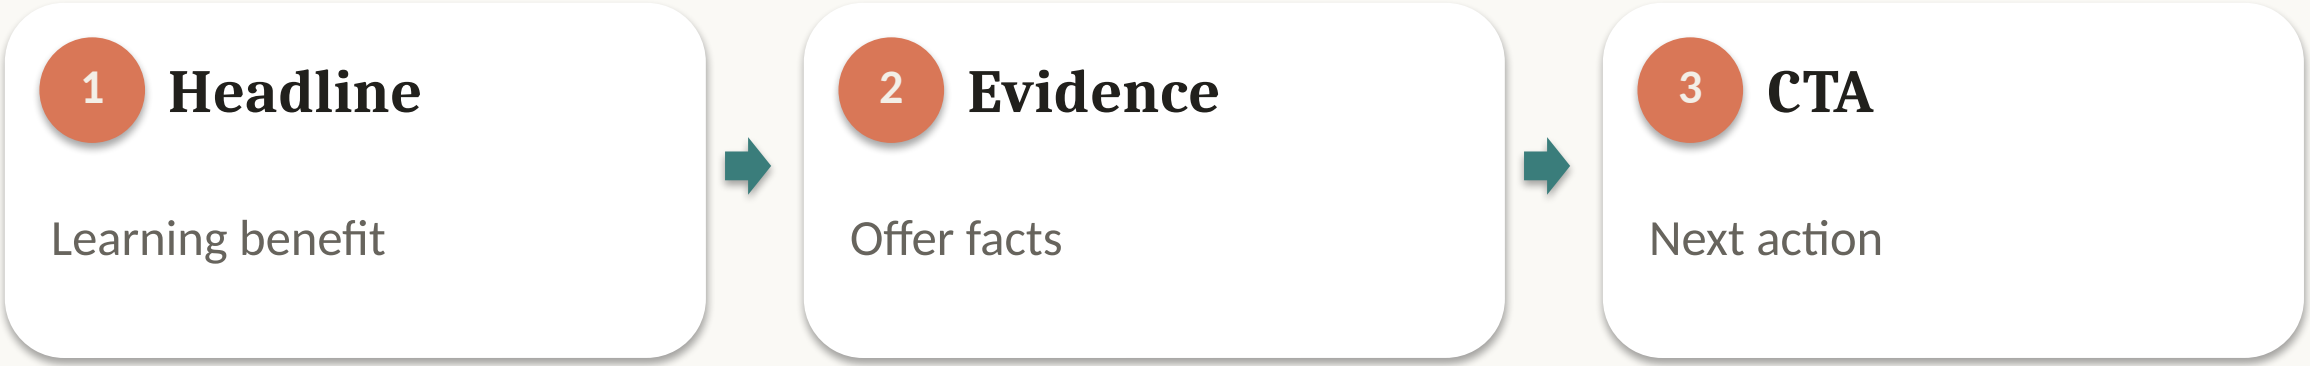

Hierarchy · evidence · editable typography

Understand the model. Apply it to the academy. Verify the saved result.

© Tertiary Infotech Academy Pte Ltd

Design begins with a single job

A flyer has a small amount of attention to earn.

For BAK-101, the main benefit is learning to manage a starter and bake loaves. Four weeks, fee and schedule are supporting facts. The CTA points to course details in the demo catalogue.

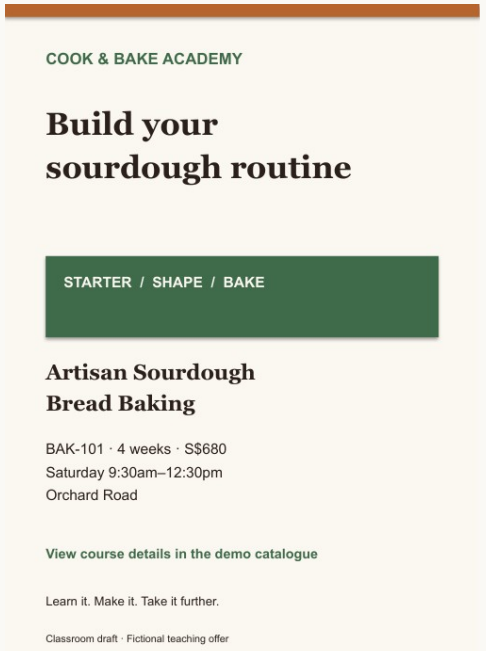

CHECK · Do not combine three courses, two offers and several competing CTAs in the first flyer.

© Tertiary Infotech Academy Pte Ltd

Visual hierarchy controls reading

Hierarchy uses size, placement and contrast to establish reading order.

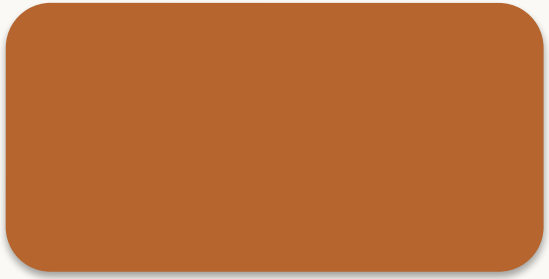

CHECK · If every line is bold and large, the eye has no route through the page.

© Tertiary Infotech Academy Pte Ltd

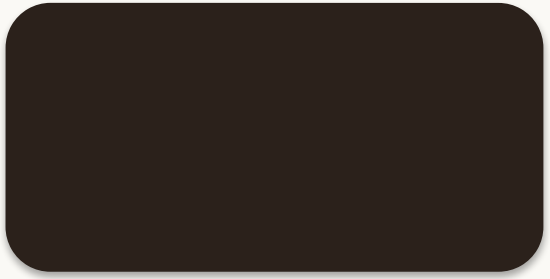

Brand system versus deck theme

The trainer deck follows the supplied terracotta, charcoal and cream reference theme.

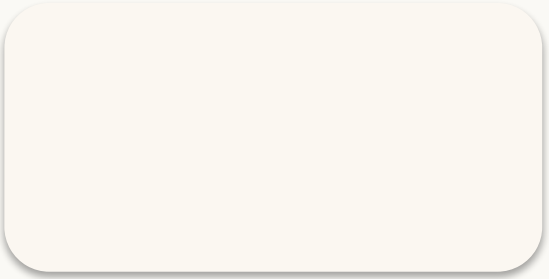

Crust

#B5652D

Ink

#2B211B

Cream

#FBF7F1

Basil

#3F6B4A

CHECK · Do not copy the trainer-slide palette into the academy campaign simply because it looks similar.

© Tertiary Infotech Academy Pte Ltd

Separate the visual from the copy

Image generation is useful for food imagery and composition studies.

1 Image

Illustrative food

2 Copy

Editable facts

3 Proof

Every visible word

Generate a natural-light sourdough still life without lettering, then place the course title, source-checked fee and CTA in editable text boxes.

CHECK · Do not use a photorealistic invented chef or classroom as proof of a real trainer or learner.

© Tertiary Infotech Academy Pte Ltd

Format is part of the brief

Print and screen formats have different viewing conditions.

1 A5

148 × 210 mm

2 Square

1080 × 1080 brief

3 Story

1080 × 1920 brief

The classroom flyer uses a 10 mm safe area. Its square derivative carries the same core facts but reduces secondary copy so the CTA remains readable.

CHECK · A square screenshot of an A5 flyer is usually a poor social layout.

© Tertiary Infotech Academy Pte Ltd

Readable contrast and typography

Text must remain readable against its background.

1 Body text

4.5:1 screen check

2 Large text

3:1 screen check

3 Real size

Read the proof

Use dark Ink on Cream for body copy. Avoid fine terracotta lettering over bread texture. Check the CTA at phone size and the print proof at 100 percent.

CHECK · Do not judge contrast from the colour name or from a zoomed-in editor view alone.

© Tertiary Infotech Academy Pte Ltd

Every factual line needs a source

A flyer may contain very few words, but each fee, date and location carries risk of being copied incorrectly.

Item	Evidence / criterion	Decision
Text proof	Visible words	Use
Ledger	Source fields	Propose
Revision	Named correction	Check

The phrase four-week course maps to weeks = 4. S$680 maps to fee = 680. Saturday 9:30am–12:30pm maps to when. Tax treatment is UNKNOWN in the fictional catalogue.

CHECK · Do not add all-inclusive or guaranteed success unless an approved source supports it.

© Tertiary Infotech Academy Pte Ltd

Use two routes, then choose

A route is a different design approach to the same brief, not a random variation in facts.

1 **Route A**

Finished loaf

2 **Route B**

Hands at work

3 **Decision**

Audience + clarity

Route A leads with a finished loaf and practical benefit. Route B leads with hands shaping dough. Both carry the same course code, fee, duration and CTA.

CHECK · Changing the offer between routes makes the comparison meaningless.

© Tertiary Infotech Academy Pte Ltd

Revise with a bounded instruction

Good feedback says what to change, why and what must remain fixed.

1 Change

One layout issue

2 Preserve

Verified facts

3 Recheck

Complete proof

Move the fee to the details panel and increase body text size. Preserve the course title, four-week duration, schedule, brand colours and tagline exactly.

CHECK · Do not accept a corrected date while overlooking a new spelling error elsewhere.

© Tertiary Infotech Academy Pte Ltd

QR codes and links must be real

A QR code is a navigation mechanism, not decoration.

1 **Destination**

Verified URL

2 **Code**

Test by scanning

3 **Unknown**

Omit or label

The classroom flyer labels its action View course details in the demo catalogue. Its link goes to the provided local preview. No real registration promise is made.

CHECK · Do not make a placeholder look like a working public booking code.

© Tertiary Infotech Academy Pte Ltd

Quality review is a comparison

A useful review compares the artifact with a specific criterion and records evidence.

Item	Evidence / criterion	Decision
Visual	Hierarchy + crop	Use
Factual	Ledger comparison	Propose
Usability	Actual-size reading	Check

A review row records fee visible in PDF, source fee = 680, and accepted or revise. A second row checks the CTA at phone size.

CHECK · Avoid an overall looks good note that does not show what was checked.

© Tertiary Infotech Academy Pte Ltd

Checkpoint: three usable formats

The flyer checkpoint contains the editable A5 source, PDF proof, square derivative, story derivative, generation prompt if used and text proof.

1 **Editable**

A5 source

2 **Portable**

PDF proof

3 **Derivative**

Square + story

The sample checkpoint is a typographic classroom layout. Learners can replace the visual with an approved image while preserving the factual text and source ledger.

CHECK · Do not hand off only flattened screenshots when an editable design was requested.

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 75 MINUTES

Lab 03 · Design an editable bakery flyer

Create an A5 flyer with source-checked copy and a complete text proof.

1 What you'll build

creative/sourdough/flyer-a5.pptx or another editable layout source, flyer-a5.pdf, flyer-copy.md, image-prompt.txt and text-proof.md.

2 Why it matters

Apply flyer design and visual review to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-03-flyer-design/README.md

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 55 MINUTES

Lab 04 · Adapt and review the flyer variants

Produce square and story derivatives that retain the offer and remain readable.

1 What you'll build

creative/sourdough/flyer-square.pptx, flyer-story.pptx, their PDF or PNG proofs, variants-proof.md and design-review.csv.

2 Why it matters

Apply flyer design and visual review to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-04-flyer-variants-and-review/README.md

© Tertiary Infotech Academy Pte Ltd

Topic 2 recap

1 Explain

Design begins with a single job. Explain why it matters to the campaign.

2 Show

Open the current lab outputs and identify the evidence that supports their facts.

3 Improve

Name one correction and the next check another marketer can reproduce.

LO2: Create and verify editable flyer designs and format variants using the academy brand.

© Tertiary Infotech Academy Pte Ltd

Social articles and content planning

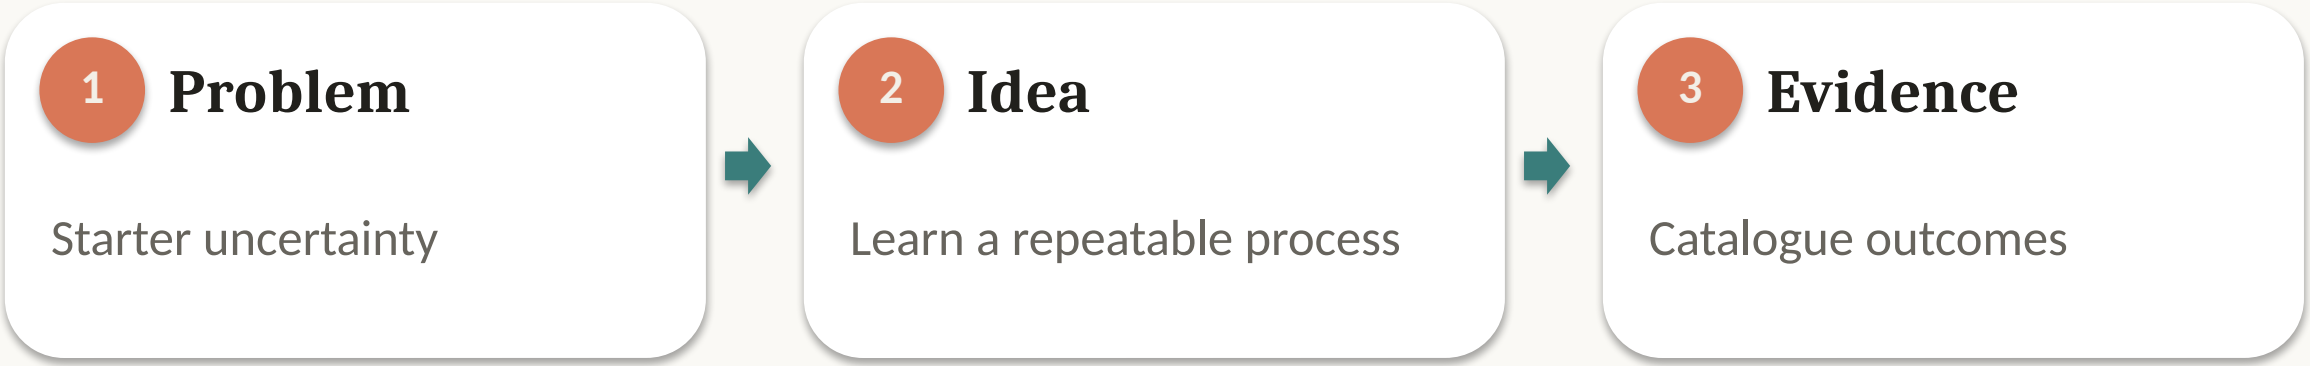

Useful teaching angles · adaptation · calendar

Understand the model. Apply it to the academy. Verify the saved result.

© Tertiary Infotech Academy Pte Ltd

A social article has a useful promise

A social article develops an idea beyond a short caption.

An article about building starter confidence explains what a beginner should look for in a structured class. It uses BAK-101's learning outcomes as evidence without inventing a recipe.

CHECK · Avoid presenting unverified food-safety or fermentation instructions as authoritative advice.

© Tertiary Infotech Academy Pte Ltd

Choose a content pillar

A content pillar is a repeatable area of value for an audience.

1 **Teach**

Skill confidence

2 **Show**

Process + preparation

3 **Invite**

Course discovery

The first article focuses on confidence. A second post explains what to bring. A course-discovery post introduces the selected course using the exact catalogue fields.

CHECK · A pillar called engagement is too vague to help a writer choose an angle.

© Tertiary Infotech Academy Pte Ltd

Use a hook without inventing a result

A hook makes the reader want to continue.

1 **Hook**

Recognisable problem

2 **Body**

Useful explanation

3 **CTA**

Relevant next step

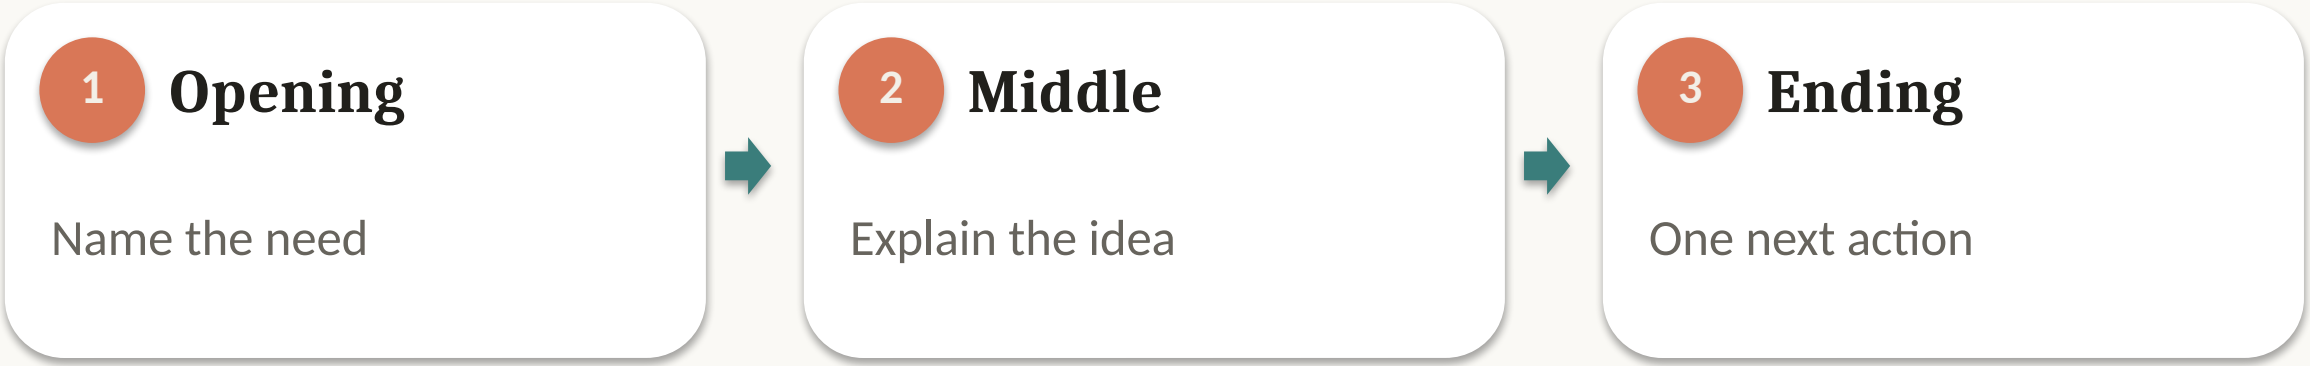

Your starter needs a routine, not guesswork is a creative hook. Become an expert in four weeks overstates the course's outcomes and should be rejected.

CHECK · Clickbait creates attention that the article cannot justify.

© Tertiary Infotech Academy Pte Ltd

Structure a self-contained article

An article needs an opening, a developed middle and a conclusion with one next action.

A 500–700 word classroom article has three sections: the beginner's problem, the learning process and what the selected class covers. Its final CTA points to course details.

CHECK · Do not pad the article with repeated AI phrases or unsupported claims to hit a word count.

© Tertiary Infotech Academy Pte Ltd

Repurpose the idea, not the paragraph

Repurposing retains the central promise and source facts while changing the format.

1 **Article**

Develop the idea

2 **Caption**

One useful insight

3 **Carousel**

Panel sequence

Turn the article into an Instagram caption under 120 words and a Facebook post. Both keep the BAK-101 course title and avoid copying the full article opening.

CHECK · Pasting the same long paragraph everywhere ignores how people read each format.

© Tertiary Infotech Academy Pte Ltd

Voice is a set of choices

The academy voice is warm, practical and confident.

1 **Warm**

Helpful language

2 **Practical**

Concrete action

3 **Confident**

Supported claims

Learn to feed and maintain a starter is grounded in the course outcomes. Unlock your limitless culinary potential is vague and inconsistent with the brand.

CHECK · A casual voice does not justify exaggeration or invented personal experience.

© Tertiary Infotech Academy Pte Ltd

Alt text describes the actual visual

Alt text conveys the meaningful content of an image to someone who cannot see it.

1 Observe

Actual contents

2 Describe

Relevant meaning

3 Verify

No invented identity

For an illustrative loaf image: A sliced sourdough loaf on a cream work surface, with its crumb visible. A flyer's essential offer should also appear in nearby text.

CHECK · Do not use alt text as a pile of keywords or describe an image that was never generated.

© Tertiary Infotech Academy Pte Ltd

A calendar is a coordination tool

A content calendar records the message, format, audience, source, owner and review status.

Item	Evidence / criterion	Decision
Day 1	Teach: useful learning question	Draft
Day 3	Prepare: what to bring	Draft
Day 9	Invite: source-checked course offer	Draft

Day 1 introduces the article, Day 3 shares a preparation caption, Day 5 uses the flyer. Each row identifies BAK-101 and points to the same claim ledger.

CHECK · A proposed calendar is not proof that posts are scheduled or published.

© Tertiary Infotech Academy Pte Ltd

Balance teaching and promotion

The reused academy social workflow limits hard-sell posts to one in five.

1 **3 posts**

Teach a useful idea

2 **1 post**

Answer a question

3 **1 post**

Direct invitation

A five-post set uses three teaching angles, one practical question and one direct course invitation. All five have a clear purpose and appropriate CTA.

CHECK · Do not label every post educational while all five ask for an immediate purchase.

© Tertiary Infotech Academy Pte Ltd

Check originality and attribution

Originality means developing the message from approved facts and a fresh angle, not paraphrasing a competitor's post.

1 **Sources**

Approved facts

2 **Writing**

Original prose

3 **Quotes**

Verified attribution

The learner drafts an article about choosing a starter-focused course and records the learning outcomes used. No external chef quote is needed to make it persuasive.

CHECK · Do not ask Work to imitate a living writer or scrape a competitor article into the draft.

© Tertiary Infotech Academy Pte Ltd

Review beyond spelling

Editorial review checks the promise, logic, audience relevance, source fidelity and action.

Item	Evidence / criterion	Decision
Meaning	Does it help?	Use
Evidence	Is it supported?	Propose
Action	Is it clear?	Check

A reviewer removes a claim that all beginners struggle and replaces it with a question: Unsure how to keep a starter routine? The proposition becomes more precise.

CHECK · Perfect grammar does not rescue a weak idea or unsupported claim.

© Tertiary Infotech Academy Pte Ltd

Checkpoint: one idea across channels

The social checkpoint contains the article, platform packages, a five-post calendar and editorial review.

1 Article

Developed argument

2 Packages

Hook + CTA + alt text

3 Calendar

Review-ready plan

Use the supplied draft article and caption checkpoint if a previous task stalled. Continue by revising it against your own brief, rather than treating the sample as an approved campaign.

CHECK · Do not mark a proposed post as live to make the handoff appear complete.

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 70 MINUTES

Lab 05 · Write a social article and platform packages

Create a useful article and two short-form adaptations from the same approved facts.

1 What you'll build

content/article.md, content/instagram.md, content/facebook.md and content/editorial-review.md.

2 Why it matters

Apply social articles and content planning to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-05-social-article-and-repurposing/README.md

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 60 MINUTES

Lab 06 · Build a content calendar and editorial gate

Create a five-post calendar with sources, dependencies and review status.

1 What you'll build

content/calendar.csv, content/posts.md and content/content-review.csv.

2 Why it matters

Apply social articles and content planning to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-06-content-calendar-and-quality/README.md

© Tertiary Infotech Academy Pte Ltd

Topic 3 recap

1 Explain

A social article has a useful promise. Explain why it matters to the campaign.

2 Show

Open the current lab outputs and identify the evidence that supports their facts.

3 Improve

Name one correction and the next check another marketer can reproduce.

LO3: Produce useful social articles, platform packages and a coherent content calendar.

© Tertiary Infotech Academy Pte Ltd

TOPIC 4 · LO4

Email campaign and measurement

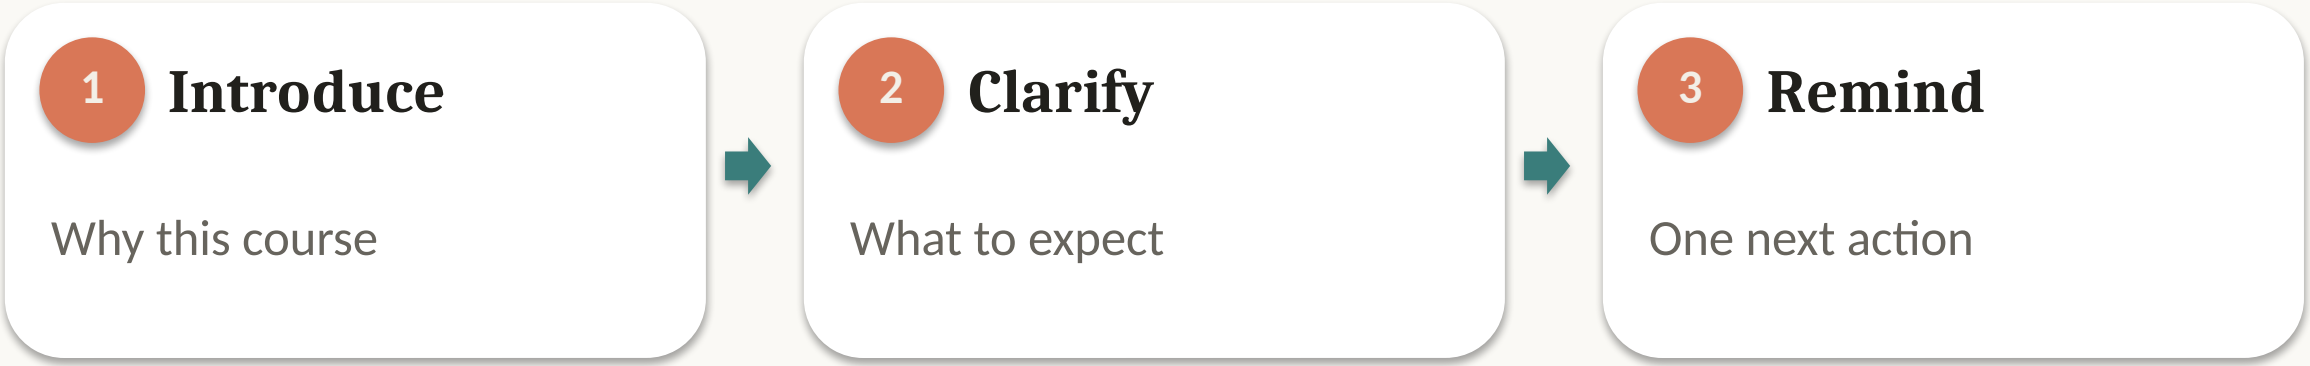

Audience rules · sequence · evidence · handoff

Understand the model. Apply it to the academy. Verify the saved result.

© Tertiary Infotech Academy Pte Ltd

Email is a sequence of decisions

A campaign sequence gives each message a distinct job.

Email 1 introduces BAK-101, Email 2 addresses what learners practise and Email 3 reminds interested readers to view details. No deadline or seats-left claim is invented.

CHECK · Do not add fake urgency just because the last message is called a reminder.

© Tertiary Infotech Academy Pte Ltd

Audience eligibility comes before copy

Segmentation chooses recipients by relevant, authorised criteria.

1 **Include**

Relevant interest

2 **Require**

Recorded permission

3 **Exclude**

Suppressed contacts

Include consent = yes, interest = bakery and suppressed = no. Exclude cooking-only interests, missing consent and suppressed contacts. All supplied addresses use example.com.

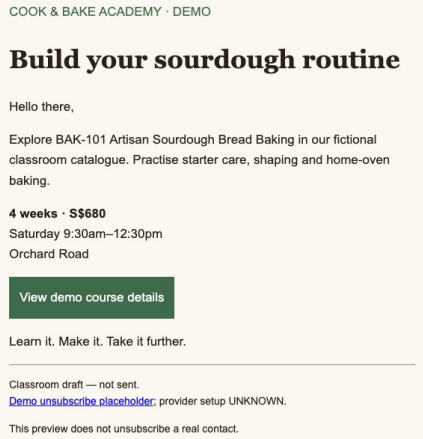

CHECK · Do not infer marketing permission from a purchase or from a public email address.

© Tertiary Infotech Academy Pte Ltd

Subject, preheader and body cooperate

A subject line helps a reader decide whether the message is relevant.

CHECK · Do not promise a discount in the subject when the body and catalogue contain none.

© Tertiary Infotech Academy Pte Ltd

Personalisation needs a fallback

Personalisation should improve relevance without making unsupported assumptions.

1 Known

Explicit interest

2 Missing

Neutral fallback

3 Preview

Actual recipient view

Use Hello there when a name is absent. Refer to your interest in baking only for contacts whose synthetic record says bakery.

CHECK · Do not address someone by a broken merge tag or expose sensitive personal data in copy.

© Tertiary Infotech Academy Pte Ltd

HTML email must work without decoration

Email clients vary in layout support.

1 **HTML**

Simple structure

2 **Text**

Equivalent message

3 **Preview**

Client limitations

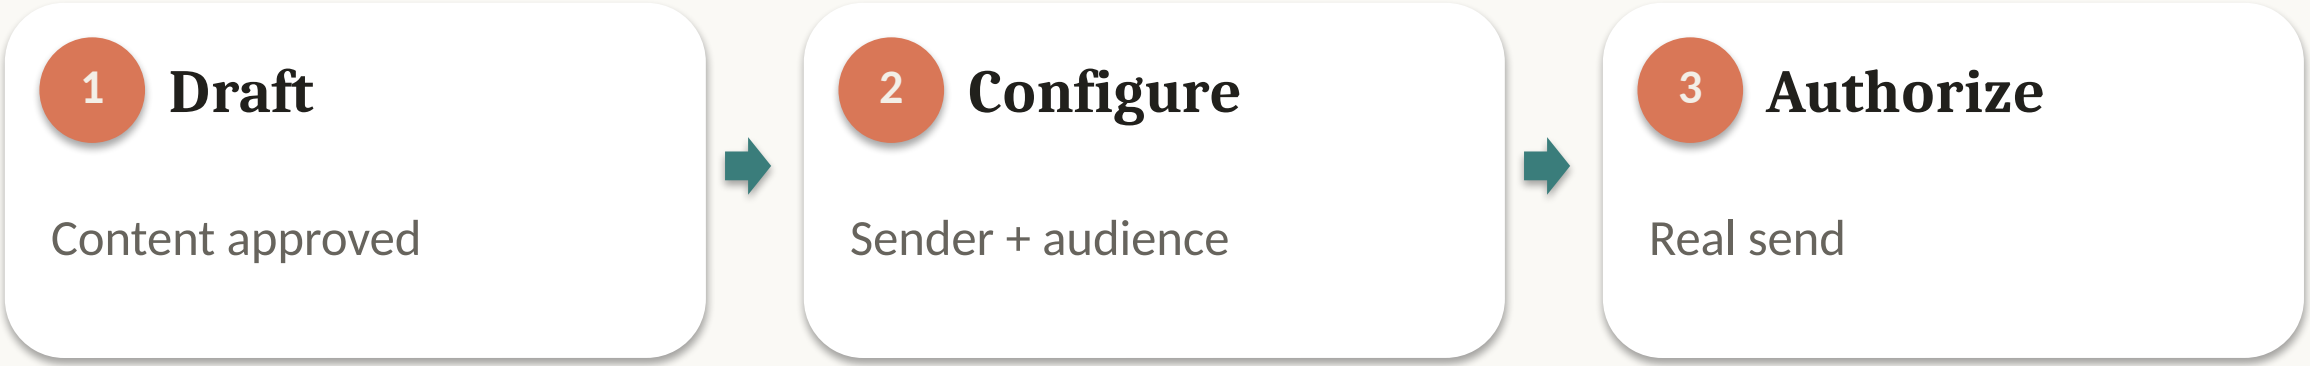

A 600 px maximum-width template includes the course facts as live text, a CTA link, a demo unsubscribe placeholder and a plain-text sibling file.

CHECK · Do not call a browser-only preview an inbox deliverability test.

© Tertiary Infotech Academy Pte Ltd

The send gate is separate

Production sending requires the approved account, audience, sender details, unsubscribe handling and current links.

The handoff contains status classroom draft, production sender UNKNOWN and unsubscribe provider configuration UNKNOWN. The learner previews the message without uploading contacts to a service.

CHECK · Do not allow a plugin to send because the copy has been reviewed.

© Tertiary Infotech Academy Pte Ltd

Use a consistent tracking taxonomy

Tracking parameters identify source, medium, campaign and creative variant.

Item	Evidence / criterion	Decision
Source	email	Use
Campaign	sourdough_oct_demo	Propose
Variant	e1_a	Check

utm_source = email, utm_medium = newsletter, utm_campaign = sourdough_oct_demo and utm_content = e1_a. A website would still need approved analytics to record visits and bookings.

CHECK · Never put subscriber email addresses or names into URL parameters.

© Tertiary Infotech Academy Pte Ltd

Measure the next action

Different metrics answer different questions.

Unique clicks ÷ delivered emails · Synthetic teaching figures

CHECK · Do not divide total clicks by recipients and call it a unique click rate.

© Tertiary Infotech Academy Pte Ltd

Opens are an imperfect signal

Open and click reports can be affected by automated activity and privacy features.

1 **Signal**

Reported opens

2 **Limit**

Privacy + bots

3 **Decision**

Action-based evidence

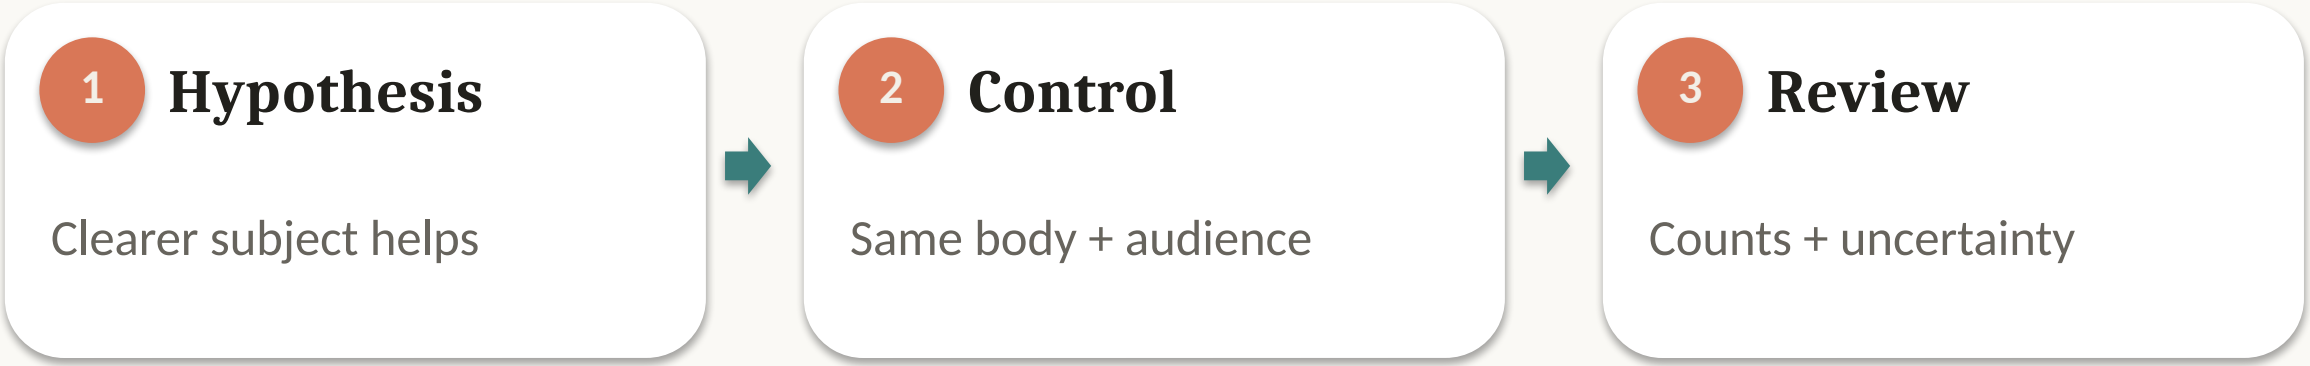

The learner compares unique clicks and bookings in the synthetic file. Real performance and bot filtering are UNKNOWN, so the recommendation is a proposed next test rather than a sales claim.

CHECK · Do not claim revenue growth from open rate alone.

© Tertiary Infotech Academy Pte Ltd

Design a controlled comparison

A useful A/B comparison changes one meaningful element while keeping audience and timing comparable.

Change only the subject line between A and B. Keep body, CTA and selection rule fixed. Variant B has a higher click rate in the teaching data; the sample is too small to claim a reliable lift.

CHECK · If everything changes, you cannot explain which change mattered.

© Tertiary Infotech Academy Pte Ltd

Handoff makes work reusable

A handoff manifest lists each file, version, purpose, source, review status and unresolved issue.

Item	Evidence / criterion	Decision
Inventory	Files + version	Use
Evidence	Claims + review	Propose
Holds	Unknowns + owner	Check

The package includes the flyer, article, calendar, three emails, segmentation result and metrics note. All are marked classroom draft; live account settings and real launch targets remain UNKNOWN.

CHECK · Do not hide unresolved facts in an appendix while labelling the campaign final.

© Tertiary Infotech Academy Pte Ltd

Checkpoint: defend the recommendation

The final checkpoint asks the learner to explain a decision using the assets and data.

1 Observed

Synthetic counts

2 Uncertain

Reliable lift

3 Next

One controlled test

The proposed next test is a clearer subject line with a longer observation window. The learner retains the selected course facts, audience rule and review package rather than reporting invented business success.

CHECK · Do not confuse completing the classroom deliverables with publishing a real campaign.

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 85 MINUTES

Lab 07 · Prepare a segmented email campaign

Build an unsent three-email sequence for an explicitly eligible synthetic audience.

1 What you'll build

email/sequence.md, email/email-1.html, email/email-1.txt, email/segment.csv and email/send-checklist.md.

2 Why it matters

Apply email campaign and measurement to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-07-email-sequence-and-segmentation/README.md

© Tertiary Infotech Academy Pte Ltd

LAB OVERVIEW · 50 MINUTES

Lab 08 · Measure and hand off the campaign

Interpret synthetic results and package a source-checked, reviewable campaign handoff.

1 What you'll build

campaign/metrics.csv, campaign/recommendation.md, campaign/manifest.csv and campaign/handoff.md.

2 Why it matters

Apply email campaign and measurement to the same source-checked campaign.

3 Finished evidence

Open the files and compare the required facts and checks in the lab guide.

Detailed procedure: labs/lab-08-measurement-and-campaign-handoff/README.md

© Tertiary Infotech Academy Pte Ltd

Topic 4 recap

1 Explain

Email is a sequence of decisions. Explain why it matters to the campaign.

2 Show

Open the current lab outputs and identify the evidence that supports their facts.

3 Improve

Name one correction and the next check another marketer can reproduce.

LO4: Prepare a segmented email sequence, interpret synthetic campaign metrics and hand off a reviewable package.

© Tertiary Infotech Academy Pte Ltd

What you achieved

1 Consistent offer

The flyer, social article and email all use one selected catalogue record.

2 Reviewable assets

Editable sources, proofs, audience rule and manifest are saved.

3 Evidence-based next step

Synthetic metrics support a proposed test, with limitations stated.

Completing the classroom package is distinct from launching a real campaign.

© Tertiary Infotech Academy Pte Ltd

Keep practising

1 **Repeat**

Choose a second catalogue course

2 **Compare**

Re-run the claim and format checks

3 **Apply**

Use an authorised real brief

Confirm current facts, tools, audience and distribution approval before production use.

© Tertiary Infotech Academy Pte Ltd
